

Nurturing caring values, communicating in a pandemic

While not undermining environmental protection now and in the future Louise Comeau, April 2020

Shifting ground, growing opportunity

- People are concerned about safety, security and well-being right now. We are focused on taking care of each other. Think about communications through a #BeWell lens
- There is an opportunity to situate environmental protection and social justice as critical to our capacity to take care of each other.

This is a time for care and interconnectedness framing

Shalom
Schwartz
Circumplex of values

Social and personal security threats like COVID-19 activate conservation, self-protection and anxiety-avoidance values (bottom quadrant)

Important to nurture social focus values (Altruism values of caring, benevolence, dependability, concerns, nature, tolerance, top left quadrant)

Want to keep collective values activated; foundation for solving climate change and other social, environmental challenges

The ground is shifting

- The COVID-19 pandemic and post-recovery period can be a strategic and learning moment.
 - Canadians, and people around the world, are facing a challenge unprecedented in recent times.
 - Protective actions are surfacing opportunities for changes in how we live and opportunities to correct faulty mental models (where pollution comes from).
 - There is a greater appreciation of the important role government plays in protecting Canadians.
 - There is greater sensitivity to inequality, and appreciation of lower-paid workers who are sustaining critical food and health systems.

The moment is now for funders to scale up

- Social distancing requirements are surfacing the advantages of a slower pace, less commuting, working from home.
- Social change or new social norms could emerge: more acceptance of teleworking, but also a more balanced life overall.
 - There is soaring demand for seeds/gardening supplies: People are easing anxiety and desire for self-sufficiency through gardening
 - Perceptions of air and cruise travel may change
 - Economic disruption can create opportunities for socializing systems change and transformative climate action

Communicating in the time of COVID-19

Nurturing altruistic values

Communications tips

- Don't talk about economic stimulus: Talk about just recovery, rebuilding, renewing, reimagining
- We too quickly fall into reform thinking and messaging: economic stimulus is all about growth, growth, growth
- We want recovery, economic resilience, ecological resilience and community and personal preparedness and security

Summarizing expert advice: Metaphors to embrace: From MobLab, Frameworks Institute, Public Interest (in UK)

- This is a love story
 - Not a war, fight, race, competition
 - This thinking leads to zero-sum thinking and excuses to abandon environmental protection measures as we have seen in Alberta and the U.S.
- People/country as a body: All parts working together, connected to each other
 - We are:
 - Interconnected
 - Dependent on each other
 - Have responsibilities to each other
 - Can sacrifice for each other's sake
 - Shared humanity

Communications tips: Learning moment

- We have an opportunity to connect with people through their lived experience: #BeWell
- Memes and visual queues that can link to fact sheets, simple factoids about these actions make you feel better and more prepared
- People are cooking, thinking about gardens/food security
- Home-based and lifestyle activities that are good for people and planet. Some memes:
 - Plant a garden
 - Missing your hugs? Hug a tree
 - Tap a tree (maple syrup time)

Summarizing expert advice: Communications tips: From MobLab, Frameworks Institute, Public Interest (in UK)

- Moment of connection
 - Resilience is community resilience
 - Emphasize: caring, cooperative, collaborative
 - Solidarity and charity
 - Standing together, responsible for each other
 - These are intrinsic, altruistic values. They are essential to sustaining collective action post-pandemic. We need to nurture them through WE/US language
- Response is a "journey" metaphor
 - Avoid "stimulus" framing in post-pandemic period
 - Focus on "just recovery", "rebuild", "renew", "reimagine"

Summarizing expert advice: Communications tips: From MobLab, Frameworks Institute, Public Interest (in UK)

- Connect to human rights messaging;
 - Protecting the most vulnerable, liveable incomes/minimum wage
 - Show solidarity
 - Look for the intersectionalities with our issues
 - Nurture setting aside differences and focus on large wins for everybody with emphasis on most vulnerable and most affected: this is the just recovery, re-imagination story

Communications tips: Learning moment

- We can re-educate people on what it means to be prepared.
- That includes having resources on hand at home and in our communities.

- Safe, secure and healthy is achievable in ways that sustain the environment and slow climate change
 - Globalization has undermined our capacity to be prepared.

Communications tips: Learning moment

- The slower pace, less commuting, working from home have upsides.
- Could see more acceptance of teleworking, but also a more balanced life overall.
- We can, when timing is right, correct faulty mental models: people can now see how burning fuels in vehicles, factories and businesses generates air pollution (visual cues from maps), and greenhouse gas emissions.
 - The fact that these emissions are now lower is not an opportunity to celebrate but to explain the links to the day-to-day activities and fuel use causing the pollution and call for a post-pandemic response that keeps emissions low and moving downward.

Climate change linkages

Not immediately, but as the opportunities arise

Pandemic shows why climate change emergency metaphor does not work

- COVID-19 pandemic IS an emergency generating an emergency response
- The pandemic response demonstrates
 WHY it is a mistake to call climate change
 an emergency
- Climate change is not an emergency in the way a non-specialist understands the concept: COVID-19 is
- Climate change is a crisis that weakens our ability to keep each other safe, to protect each other from future pandemics or other extreme events
 - What happens when there is a pandemic and flooding or wildfire and we can't protect people in common locations?

Issue

COVID-19 triggers strong security values displacing other values. Climate change communicators must articulate a vision of how a climate friendly world keeps families and communities safe, secure and healthy making it a desirable vision for investment and economic recovery.

Challenge

To rise above our COVID-19 fears and be heard, we need a story showing how we can reduce inequality and have a climate-friendly world that keeps people safe, secure and healthy.

The Story

Safe. Secure. Healthy. That's what we want for families and communities. Let's take care of each other by reducing inequality. Let's take care of each other by protecting the environment. We can invest in affordable, reliable and renewable electricity to power our lives. We can build greener infrastructure, local food supply, gardens, and green spaces. Let's use economic recovery to create a safer, more secure, and healthier world.

Opportunity

We can frame a narrative that builds an accurate mental model of the sources of air and climate pollution and that links safety, security and health concerns to reducing inequality, and environmental destruction.

Solution

Frame climate change solutions as solutions that make Canadians safer, more secure and healthier, while putting people to work, cutting pollution, reducing inequality, and taking care of each other.

Thank you
