Canada**

# Compass for Municipalities

A special thank you to The Atmospheric Fund for providing the funding that made this project possible!

# Compass for Municipalities

- The goal of *Compass for Municipalities* is to allow non-technical municipal staff to complete a high-level review of energy models for compliance with municipal Green Development Standards and energy performance requirements.
- The project builds on the Energy Compass energy model benchmarking and analysis platform
- Web based [energycompass.design](http://energycompass.design)

# Compass for Municipalities

- Compass is **not** modelling software. Compass reads the output files from industry standard modelling software, interprets and aggregates the internal data to be more accessible for users
- Energy Model result files submitted by applicants are uploaded to Compass
- Compass analyzes the results files and produces an *Energy Modelling Compliance Report*

# Compass for Municipalities

The *Energy Modelling Compliance Report* includes:

- Key Variable Summary  
Presents key modelling variables in a standardized table for easy review
- Rule Based Review  
Identifies any issues and presents next steps / follow up

# Compass for Municipalities

- Users can also explore aggregate data of all projects uploaded by the municipality
  - Display different metrics
  - Filter by project meta data
  - Download data for external reporting and analysis

# Getting Started

- Your municipality needs to be registered on the platform
- An administrator from your municipality will be assigned to control access to other users
- Send an email to [support@energycompass.design](mailto:support@energycompass.design) to get your municipality registered on the platform

# Getting Started

- Once your municipality has been registered, you will be able to sign up using the link on the home page
- As the first user at your municipality your account will also need to be approved by Compass staff
- Other users will need to be approved by one of your municipality's administrators to gain access to the platform

# Project Management

- *Folders* are used to organize projects
- *Projects* should correspond to a physical building
- *Versions* are used to represent different iterations of a project
  - Comparing different design options
  - Tracking design progress (RZA → SPA → IFC → As-built)

# Project Management

- The results files from the proposed and, if applicable, the reference model are uploaded to the tool
- Compass supports the most popular energy modelling software:
  - DOE2 (eQuest, CAN-QUEST)
  - IES-VE
  - EnergyPlus

# Energy Modelling Compliance Report

## Key Variable Summary

- Presents key modelling variables in a standardized table for easy review
- The values should be compared against those provided in the submitted project documentation

# Energy Modelling Compliance Report

## Rule Based Review

- Establishes a set of rules and checks for common energy modelling issues:
  - Input and output variables fall within expected ranges
  - Reference models match Proposed models as necessary
  - Mandatory requirements are met
- Visually flags issues in the report
- Provides a description of the issues and next steps / follow up

# Energy Modelling Compliance Report (demo)

## Key Variable Summary

### Project Details

Project Name	Office Tower 1
Version Name	SPA
Location	150 Main Street, Great Town, Ontario

### Building Properties

Area	4,479	m <sup>2</sup>
Volume	13,652	m <sup>3</sup>

### Enclosure Details

	Roof Area (m <sup>2</sup> )	Skylight Area (m <sup>2</sup> )	WWR
Roof	1,671	0	0%

	Wall Area (m <sup>2</sup> )	Window Area (m <sup>2</sup> )	WWR
North	665	117	18%
East	1,200	277	23%
South	442	27	6%
West	926	312	34%
Total	3,233	733	23%

	U-value (S.I) W/m <sup>2</sup> ·K	R-value (S.I) m <sup>2</sup> ·K/W
Walls Above Grade	0.250	4.003
Walls Below Grade	0.926	1.080
Windows	1.874	0.534

## Rule Based Review

#001	<b>Check:</b> Reference Model Presence <b>Result:</b> Reference Model provided. <b>Submitter Comment:</b>	✓	
#002	<b>Check:</b> Reference Model Match: Area <b>Result:</b> Proposed/Reference Model area does not match. Corrections Required <b>Submitter Comment:</b>		⚠
#003	<b>Check:</b> Reference Model Match: Volume <b>Result:</b> Proposed/Reference Model volume does not match. Corrections Required <b>Submitter Comment:</b>		⚠
#004	<b>Check:</b> Reference Model Match: Occupancy <b>Result:</b> Proposed Model occupancy matches Reference Model. <b>Submitter Comment:</b>	✓	
#005	<b>Check:</b> Reference Model Match: Equipment Power <b>Result:</b> Proposed/Reference Model equipment power does not match. Corrections Required <b>Submitter Comment:</b>		⚠
#006	<b>Check:</b> Value Within Range: Lighting EUI <b>Result:</b> Lighting EUI within expected range. <b>Submitter Comment:</b>	✓	
#007	<b>Check:</b> Value Within Range: Plug Loads EUI <b>Result:</b> Plug Loads EUI within expected range. <b>Submitter Comment:</b>	✓	
	<b>Check:</b> Value Within Range: Space Heating EUI		

# Portfolio Metrics

- An aggregate view of projects uploaded by your municipality
- Display:
  - Count, Floor Area, Energy Usage, Fuel Mix, GHG emissions/savings
- Filter projects by:
  - Year, Building Type, Floor Area
- View trending over time
- Download data for external analysis and reporting
