

Ontario Provincial Climate Change Impact Assessment

Al Douglas, Climate Risk Institute Clean Air Council April 17, 2024

### About CRI

#### Large Scale Risk Assessments

#### **Provincial Climate Change Impact** Assessment (PCCIA) - Objectives

- Provide a risk baseline
- Support decision-making that protects investments, livelihoods and public health
- Improve our understanding to inform future decisions that build more resilience to climate impacts
- Scalable and replicable methods for local and future assessments
- Inform adaptation by governments, businesses and communities CRITICAL!!!

#### **Overview**

- Multi-sectoral climate change impact assessment
- 5 Areas of Focus (AoF)
- 6 Regions

#### **Geographic Regions**

#### **Oversight and Participants**

#### **Key Project Elements**

#### **Climate Analytics**

- 15 Climate Hazards
- Representative Concentration Pathways 4.5 and 8.5 (RCP)
- Current and Future (2050s, 2080s)

#### **Area of Focus Delineation**

## **Risk Registry**

# Details of the interactions and risk scenarios through formulas

#### **Risk Roll-Up Approach**

### Adaptive Capacity

"the ability of systems, institutions, humans, and other organisms to adjust to potential damage, to take advantage of opportunities, or to respond to consequences"

- 1. Technology
- 2. Resource Availability
- 3. Equity
- 4. Governance
- 5. Complexity

## **Sample-Natural Environment**

Climate change is already a threat to Ontario's natural environment and is expected to continue to **intensify risks to species, habitats, and ecosystems into the future**. In tandem with significant human development pressures, risk profiles across almost all natural systems that were assessed are rising to 'high' by mid-century. By the end of the century, one quarter of climate risks to the natural environment are expected to be 'very high'.

**Species and habitats are irreplaceable**, and ecosystem services and functions that benefit society are difficult and costly to replicate via engineered technical substitutes. **A healthy and resilient natural environment in Ontario is the essential foundation to adapting to a changing climate**.

## Natural Environment

#### Adaptation and Resilience Best Practices (ARBP or ABP)

**Ontario Provincial Climate Change Impact Assessment** 

### **ARBP Reporting Process**

1. Engagement with subject matter experts and provincial government reps;

 Research and literature review. Practices that have been implemented, and/or have been researched and peer-reviewed, and

3. Inclusion of low-risk, high-reward practices identified by subject matter experts for each Area of Focus.

Peer reviewed for utility and gaps.

#### **ARBP** Audiences

- 1. Policy-makers
- 2. Decision-makers
- 3. Practitioners (technical)
- 4. Transfer agents
- 5. Others (eg. homeowners, academia, institutions, etc)

#### **Over-arching Principles for Adaptation**

- Ensure resilient foundations through rapid and inclusive development.
- Facilitate the adaptation of businesses and people.
- Adapt land use patterns and protect critical public assets and services.
- Increase people's capacity to cope with and recover from shocks.
- Anticipate and manage macroeconomic and fiscal risks.
- Ensure effective implementation through prioritization and continuous monitoring.

## **Cautions for Mal-Adaptation**

- Focusing on technological fixes versus holistic approaches;
- Difficulty of distinguishing the difference between adaptation and development;
- Difficult in quantifying unquantifiable metrics and thus using inaccurate indicators to measure success; and
- Competing challenges that lead to adaptation not being prioritized.

## **Overarching Adaptation**

| Adaptation Category          | Examples of Adaptation Measures  |
|------------------------------|--|
| Projects or Programs         | <ul> <li>Facilitate access to relevant climate and hydrological data</li> <li>Review and implement flood risk strategies in high-risk areas</li> <li>Adopt Nature Based Solutions</li> <li>Develop a suite of decision-support tools for climate change adaptation</li> </ul>          |
| Research and<br>Development  | <ul> <li>Integrate monitoring and evaluation of adaptation planning</li> <li>Leverage larger city-based resiliency networks in Canada and internationally</li> </ul>   |
| Investment and<br>Incentives | <ul> <li>Develop programs and enhance policies that support</li> <li>Nature-Based Solutions and increase protection of green spaces and green infrastructure</li> </ul>  |
| Policy and Regulation        | <ul> <li>Apply a climate lens to government decision-making</li> <li>Embed climate risk in land use planning and policy</li> <li>Apply an equity lens to all climate change adaptation planning</li> <li>Apply an Indigenous lens to all climate change adaptation planning</li> </ul> |

## Adaptation Practice per AoF

| Adaptation Category       | Examples of Adaptation Measures  |
|---------------------------|--|
| Projects or Programs      | <ul> <li>Strengthen monitoring and surveillance programs for pest and disease management.</li> <li>Expand decision support tools for on-farm water, soil and nutrient management.</li> <li>Enable demand-driven knowledge transformation and transfer through collaboration between researchers and farmers.</li> </ul>  |
| Research and Development  | <ul> <li>Support and advance research on agricultural expansion opportunities under a changing climate.</li> <li>Undertake research and development efforts into new and climate-resilient varieties/species.</li> <li>Fund a knowledge transfer and sharing program for practical adaptation and best management practice sharing with Indigenous knowledge at its core.</li> </ul> |
| Investment and Incentives | <ul> <li>Support and advance research on agricultural expansion opportunities under a changing climate.</li> <li>Support technological research and advancements on precision agriculture, advance drainage and irrigation systems.</li> </ul>   |
| Policy and Regulation     | <ul> <li>Apply a climate lens to government decision-making, and ensure integration of<br/>Indigenous perspectives.</li> <li>Invest and strengthen coordination and integration of water management</li> </ul>   |

### **Key Messages**

- The climate has changed. Between 1948 and 2016, average temperatures have risen 1.3°C and total annual precipitation has increased by 9.7% in Ontario.
- Ontario has already experienced significant climate impacts from flooding, wildfires, heat waves, ice storms and many other events.
- The climate will continue to change. In fact, we are locked into climate impacts over the next half century, with impacts expected to become more frequent and more extreme.
- There is an urgent need to act, to prepare and to invest. The impacts associated with a changing climate have become more apparent in daily life, increasing risks to social, economic, cultural and ecological systems.
